

SUMMARY

Software Engineer with a Bachelor's in Software Engineering, focused on software architecture, software design, and end-to-end product development. Strong in Java programming, coding, and debugging software, with hands-on delivery across **Desktop**, **Web**, and **Mobile**. Solid Computer Science foundations in security and JavaScript, prioritizing clean, tested releases with Docker and CI/CD.

EDUCATION

Bachelor's in Software Engineering | University of Minho

2023 – 2026

- Bachelor's degree, Mean Grade: 14/20.
- Relevant coursework: Object-Oriented Programming (Java, Servlets), Software Design and Software Architecture (UML, flowcharts), Software Analysis & Testing (JUnit, EvoSuite), Computer Systems Security, Computer Networks, Language Processing. Course projects covered programming, coding, and debugging software for product development, prioritizing Computer Science fundamentals.

TECHNICAL SKILLS

Languages: C, Java, Python, TypeScript, JavaScript

Frameworks: React, Node.js, Express, Tauri, Flutter

Data/DevOps: PostgreSQL, Supabase, Git, Linux/Bash, Docker, GitHub Actions (CI/CD)

Quality & AI: JUnit, EvoSuite, Debugging software, Flowcharts, DeepSeek API, Ollama

Soft Skills: Teamwork, Fast learner, Problem-solving, Communication, Adaptability, Prioritizing, Attention to detail

Spoken: Portuguese (Native), English (Fluent)

PROFESSIONAL EXPERIENCE

Software Analysis & Testing

2025 – 2026

Stack: Java, JUnit 5, jqwik, PIT, JaCoCo, EvoSuite, Maven

- Delivered the Software Analysis & Testing course project (18.5/20): full test suites for 2 Java applications, covering unit, property-based, mutation, and coverage analysis.
- Authored 120+ unit and property-based tests in Java, reaching 90%+ line coverage; applied systematic programming, coding, and debugging software practices, cutting regression check time by 50%.
- Automated the whole workflow with a 6-target Makefile (build, unit/property/mutation tests, coverage, report) plus generic JDK, Maven, and EvoSuite runners, shipping a 20-page LaTeX report of consolidated results.

Zenyth IDE

2025 – Present

Stack: React, TypeScript, Tauri, Rust, Ollama

- Developed a native desktop IDE that streams terminal I/O bidirectionally with zero data loss, enabling real-time code execution from a Tauri-wrapped React interface; shipped 12+ iterative builds.
- Designed a Rust proxy for local LLM inference (Ollama) with sub-100ms first-token latency, handling backpressure, cancellation, and graceful error recovery.
- Led product development from software architecture to software design and release, prioritizing stability with daily programming, coding, and debugging software; reduced startup time by 35%.

VencordMobile

2025 – Present

Stack: Dart (Flutter), JavaScript, WebView, CI/CD

- Shipped an Android client that loads Discord's mobile web app and injects the Vencord plugin bundle (155+ plugins), enabling features unavailable in any other mobile client.
- Engineered a Flutter-to-JavaScript bridge via postMessage for bidirectional native-web communication with synchronized state.
- Prioritized the product development backlog across 155+ plugins; programming and coding in Dart/JavaScript with systematic debugging software. Cut release time by 60% by automating esbuild bundling into a single IIFE, with GitHub Actions producing signed APKs on 10+ releases.
